PROFILE

Information Technology student specializing in frontend development and quality assurance, with hands-on experience building web and mobile applications. Accustomed in programming, designing straightforward UI/UX, and problem solving. Looking forward to learn new sets of skills to be of value inside the tech industry. Seeking an internship or developer role to apply my skills and grow in a collaborative team.

EDUCATION

Science, Technology, Engineering and Mathematics Undergraduate 2021 – 2023
Daniel Maramba National High School, Sta. Barbara, Pangasinan

- Graduated with honors.

Bachelor of Science in Information Technology 2023 – Present
PHINMA University of Pangasinan, Dagupan, Pangasinan

- Specialization: System Development with an elective in Application Analytics.
- Relevant coursework: Frontend Development, Object-Oriented Programming, Web & Mobile Development, Quality Assurance Testing, Data Structures & Algorithms.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, HTML/CSS, Dart, Kotlin

Frameworks & Libraries: React, Node.js, MERN Stack, Flutter, AWS

Tools: Git & GitHub, VS Code, Android Studio, Figma

PROJECTS

Flood Watch September 2024 – November 2024
Frontend Developer | Dart, Flask, Laravel, PostgreSQL | github.com/PrinceValdez/FloodMapUI

- A Flutter-based mobile application designed to help its users within Brgy. Bonuan Boquig to stay informed about flood conditions and water levels of the area. It combines data from Arduino sensors, and historical flood data to determine and update the current flood levels and future predictions.
- The application has a real time connection to the database which is connected to the Arduino. Through this, the backend can predict the flood levels using the data that is stored within the sensors.

LibTrack January 2025 – April 2025
Mobile Developer | Kotlin, PHP, MySQL | github.com/tolimatt/LibtrackApp

- Libtrack is a focus library management system designed to digitize traditional library operations. It aims to enhance the user experience for both library members and administrators by offering features like book search, library attendance, and borrowing management. By integrating web and mobile platforms, the application ensures accessibility, scalability, and modernized library services.
- The team used the design thinking methodology in order to develop the project and its documentation. Additionally, the methodology is an iterative process which prioritizes the suggestions of the stakeholders.

My Crew Manager August 2025 – November 2025
QA Tester | JavaScript, React, Node.js, PostgreSQL | github.com/goSTYLO/My-Crew-Manager

- An application that helps organizations and groups to meet their deadline in time. This is by setting up kanban boards for the developers to stay motivated in finishing the project at hand. Moreover, all of this is possible through the use of artificial intelligence that aids the group to finish their projects on time.
- The application has the feature to summarize the whole proposal of a company. Moreover, it is a responsive and cross-platform application.

- An educational cross-platform application that utilizes gesture recognition to assist individual on learning Filipino Sign Language. It contains learning modules on the different FSL signs, and a gesture recognition feature that allows the user to test their knowledge on the learned signs.
- The combines real-time computer vision AI gesture recognition with gamified learning paths and verifiable milestone certificates

CERTIFICATIONS & ACHIEVEMENTS

- Python for Data Science, AI & Development, COURSERA
<https://coursera.org/verify/YZCT2B6ZY8BD>

- AWS Fundamentals, ZUITT
