Striving and constantly improving in hopes of being a Software Developer . Looking forward to learn new sets of skills to be of value inside the tech industry.

EDUCATION

PHINMA University of Pangasinan

Bachelor of Science in Information Technology
2023 – Present

Daniel Maramba National High School

Graduate in Science, Technology, Engineering, and
Mathematics with honors
2021 – 2023

ACADEMIC PROJECTS

BOARDMATE

2025

- An application that utilizes the MERN stack to help dorm owners to manage their rooms and tenants. This web application also helps their tenants by sending a notification if their rent is in due date. In addition, the application is convenient for the room owners to resolve their issues within the room.

MY CREW MANAGER

2025

- An application that helps organizations and groups to meet their deadline in time. This is by setting up kanban boards for the developers to stay motivated in finishing the project at hand. Moreover, all of this is possible through the use of artificial intelligence that aids the group to finish their projects on time.

FLOODWATCH

2024

- A Flutter-based mobile application designed to help its users within Brgy. Bonuan Boquig to stay informed about flood conditions and water levels of the area. It combines data from Arduino sensors, and historical flood data to determine and update the current flood levels and future predictions.

LIBTRACK

2025

- An application designed to improve the user experience for both library members and administrators of PHINMA University of Pangasinan. This can be achieved by providing features such as attendance tracking, book searching, reservations, and borrowing management.
